## FLAC-compressed wave file (44.1 kHz, 16 bit, 8 channels)

Please verify correctness of peak and average meters visually.

Given levels describe the first channel. The other channels have been amplified in steps of +5.00 dB per channel (first test) and +1.00 dB (all other tests), respectively. All readouts are given in K-20.

```
00:00.000 - 00:01.000 silence
00:01.000 - 00:04.000 sine wave (997 Hz, -60.10 dB FS peak, -40.10 dB K-20)
```

[signal meter ch. 1 should not light]
[signal meter ch. 2 should barely light]
[...]
[signal meter ch. 8 should fully light]

```
00:04.000 - 00:05.000
                       silence
00:05.000 - 00:08.000
                       sine wave (997 Hz, -24.05 dB FS peak, -4.05 dB K-20)
                       [peak meter ch. 1 should read
                                                       -4.05 dBl
                                                                   [---]
                                                       -3.05 dB]
                        [peak meter ch. 2 should read
                                                                   [LOW]
                        [peak meter ch. 3 should read
                                                       -2.05 dB1
                        [peak meter ch. 4 should read
                                                       -1.05 dB]
                        [peak meter ch. 5 should read
                                                       -0.05 dB1
                                                       +0.95 dB]
